

AFTER-SCHOOL CLUB

PRIMARY SCHOOL NO. 6 IN SANOK

During classes we develop children's interests, talents and creativity. We popularise the principles of health culture, develop independence and social activity, cooperate with parents, teachers and the local school environment. We also do many interesting projects.

Our activities in the after-school club:

- Reading
- Art
- Health promotion
- Dance
- Sport
- English
- Computer

We take part in various projects that encourage students to read books.

We read selected books and fill our notebooks with information about the readings. We do many interesting tasks, especially ecological ones connected with the book.

We visit a school library and borrow books, then we read them during classes.

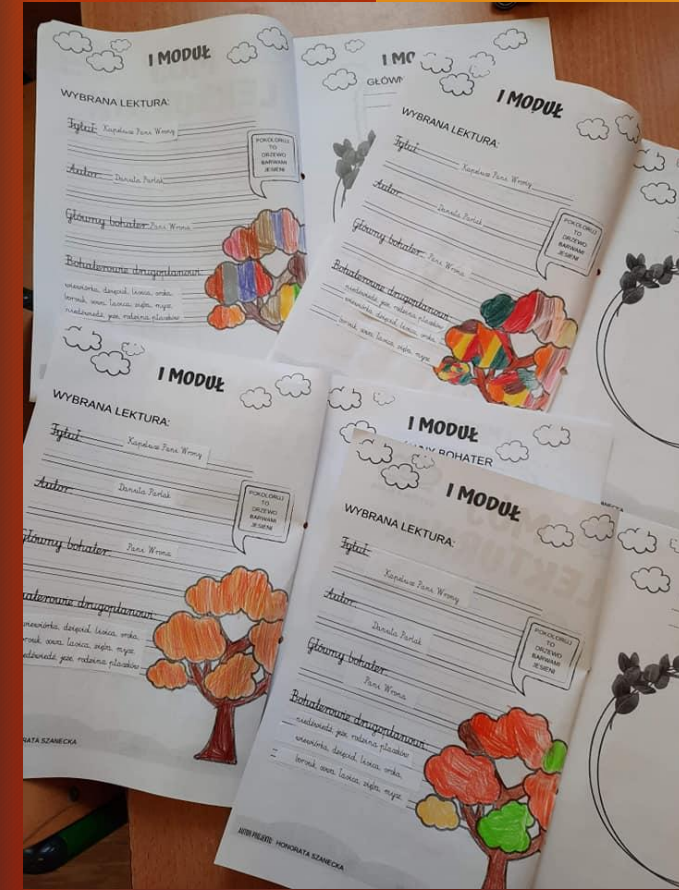

Here you can see the teacher and students reading

Students fill the information about the books they read.

These are the students' notebooks.
They take notes and draw colourful pictures of main characters.

Here are some of the tasks which we did in this project.
When the topic of the book was connected with trees, we made a big tree
and talked about what trees give people.

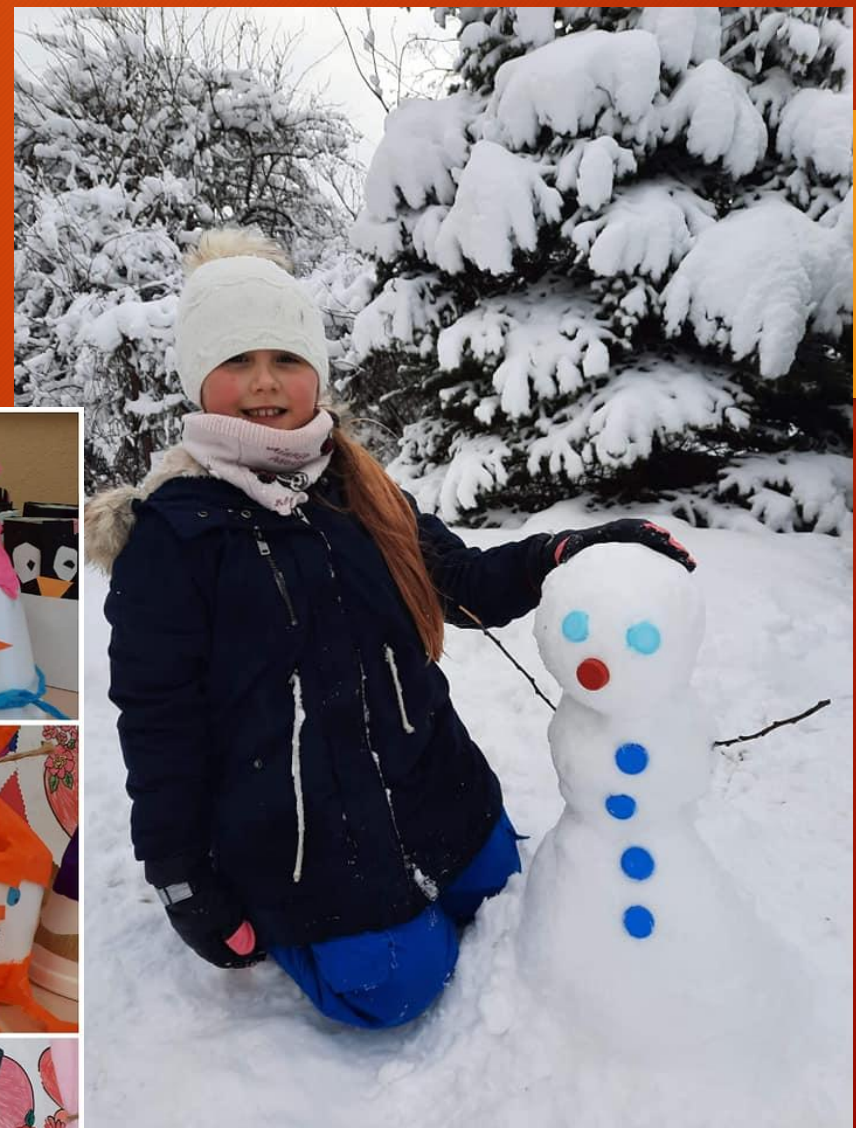

On the Tree Day we hugged trees. We made a tree, to which we attached leaves with the titles of the books the children had read. The students made the main character - a penguin - from toilet paper rolls.

We took part in the eco snowman challenge. The children made snowmen out of snow and eco-friendly materials.

We also read about space and constellations. The students made models of the solar system.

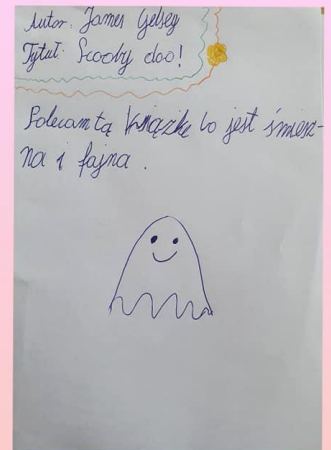

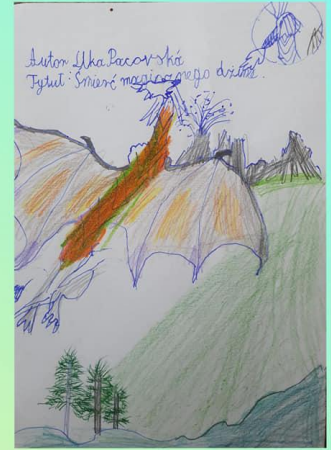

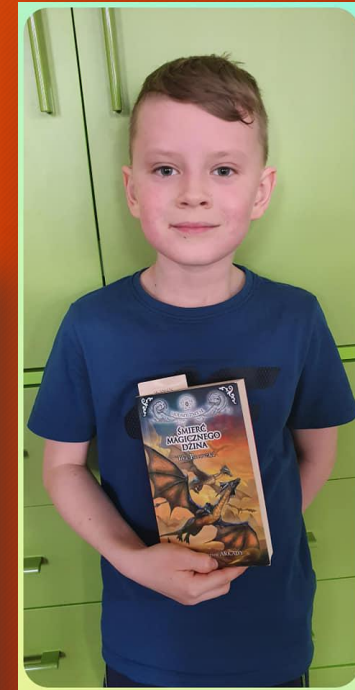

We also made posters to encourage others to read books.

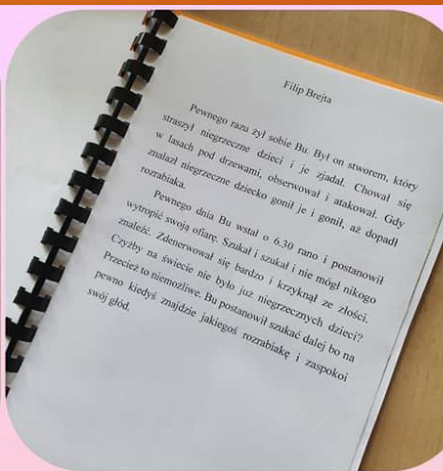

Students brought their favourite books to class and talked about them encouraging their classmates to read them.

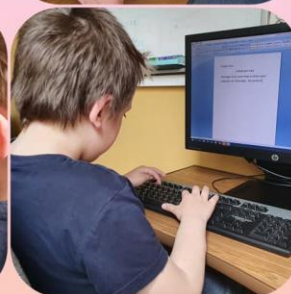

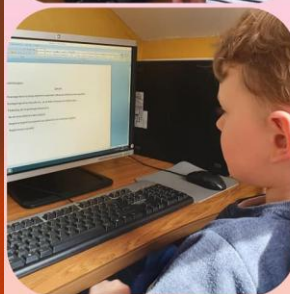

The students enjoyed looking through the books and some of them were read during classes.

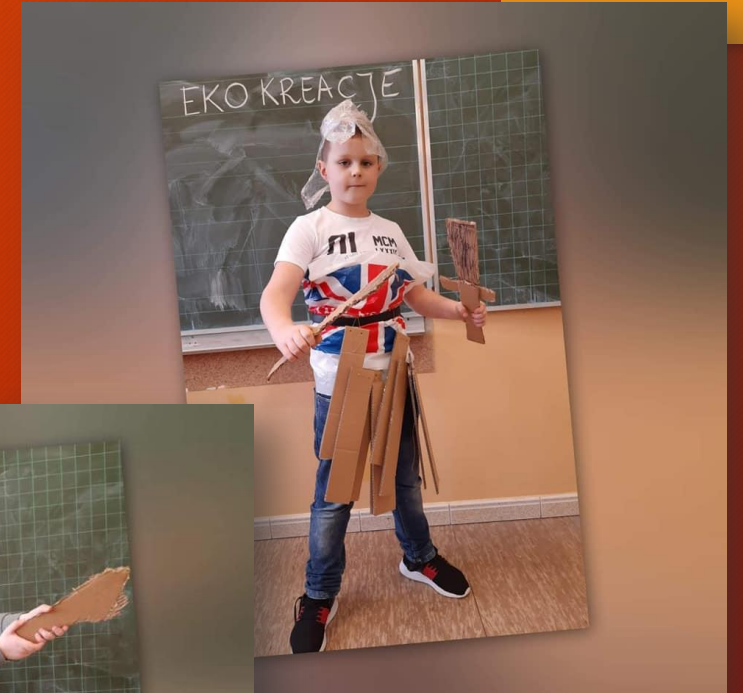

The students created the book themselves, wrote the stories, drew the illustrations and published it.

Another task was ecological fashion show.

The classroom was transformed into a fashion designer's workshop. The students designed outfits out of eco-materials with great commitment. Then the effects of their work were presented in a fashion show.

We also take part in a postcard exchange. We write greetings, make illustrations and send cards to other schools in Poland. Recently the children designed the cards themselves.

We also care about health. We take part in projects and organize health promotion activities.

Children learn how to make healthy meals.

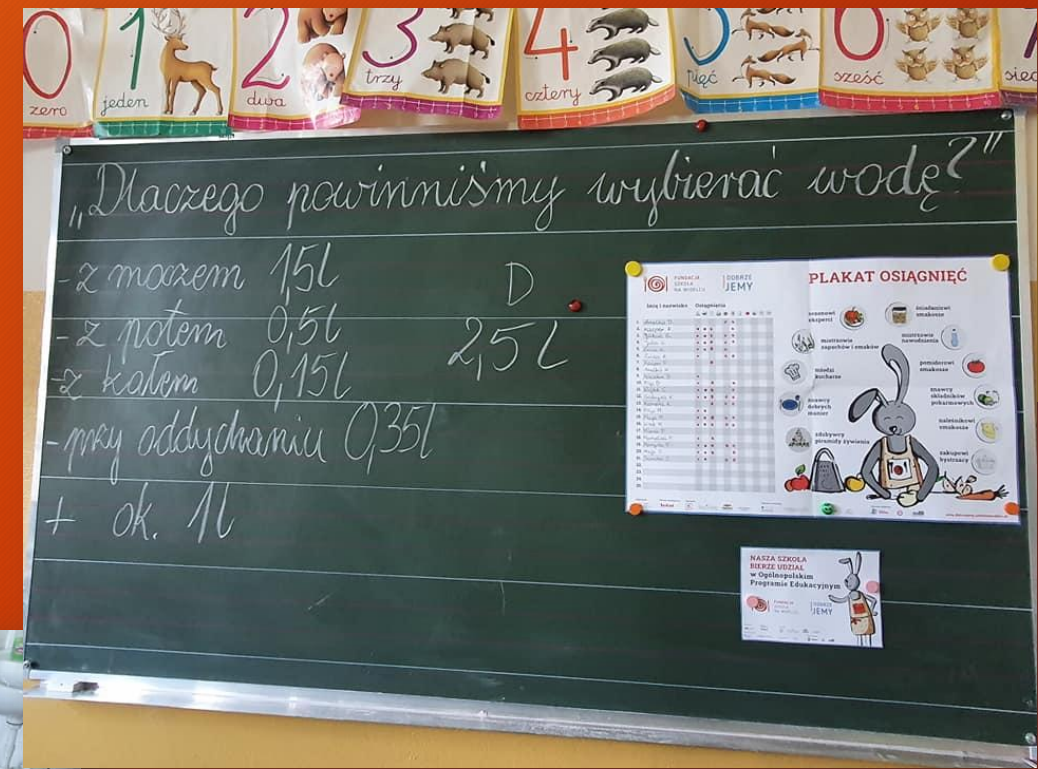

Here the children did an experiment to find out how much sugar is in drinks.

The topic here was:
why should we
choose water?

The children learned interesting facts
about water in the human body. They
did an experiment comparing the
amount of water a person drinks and
the amount of water excreted by the
body.

Here the pupils smelled, touched and tasted many herbs and spices used in cooking. They learned their names and health values. Using magic glasses, each willing student took a taste test.

We also take care of the environment. We teach children how to sort rubbish.

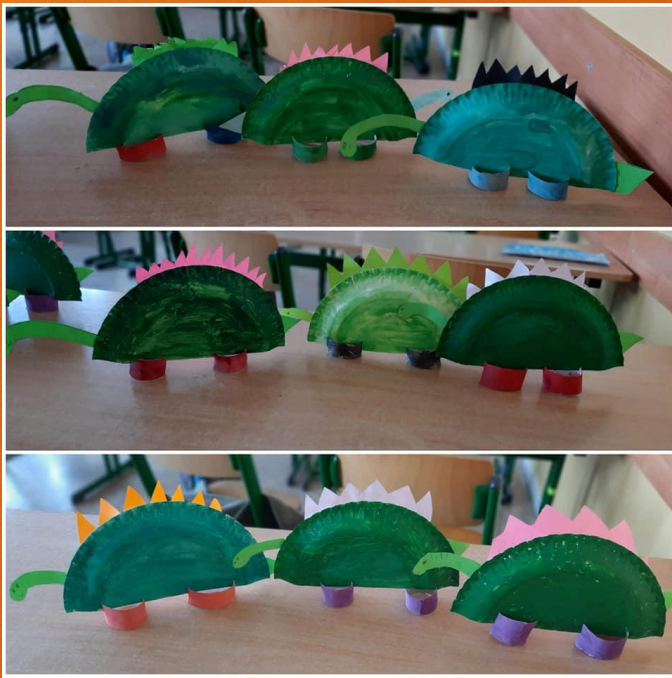

During art classes we develop students' creativity. We make artwork using a variety of techniques. We often use eco materials.

We are constantly trying to make the classes more attractive. We look for new methods of work so that every student can develop, find something interesting for themselves and willingly participate in such activities.
